PROJECT REVIEW : MILESTONE PROJECT – 2

Date: 17-04-2026

**Design and Development of a React JS Based Ticket Booking Web Application for
Internal Department Event**

SDG: 9 – Industry , Innovation and Infrastructure

Presented By:

E.K.V.L Pujitha – VTU25880 – Reg.No.23UECS0172

Courses Handling Faculty:

Dr. Hafizur Rahman – Assistant Professor

INTRODUCTION

1

This project focuses on developing a web-based ticket booking system for internal department events such as technical fests or seminars. Traditional booking methods involve manual registration, which can lead to errors, overbooking, and inefficiency.

2

3

The proposed system is built using React JS to provide a dynamic and user-friendly interface. It allows students and faculty to view event details and book tickets online with real-time updates. The application ensures proper validation and prevents overbooking by managing ticket availability dynamically.

PROBLEM STATEMENT

1

In many institutions, event ticket booking is handled manually or through basic forms without validation. This leads to issues such as:

2

- Overbooking of tickets
- Lack of real-time availability updates
- Invalid or incomplete user data
- Poor user experience

3

4

5

6

There is a need for a system that provides real-time ticket booking with proper validation and user-friendly interaction.

7

8

9

OBJECTIVE(S)

1

2

3

4

5

6

7

8

9

- To design and develop a React JS-based ticket booking application
- To allow users to view event details clearly
- To enable online ticket booking with validation
- To prevent booking more tickets than available
- To display booking confirmation and summary
- To improve user experience using dynamic UI

PROPOSED SYSTEM

1

2

3

4

5

6

7

8

9

- The proposed system is a React-based web application that:
- Displays event details such as name, date, venue, and price
- Allows users to book tickets through a form
- Validates user input fields
- Prevents booking beyond available tickets
- Updates ticket availability dynamically
- Displays booking confirmation and summary
- This system improves efficiency and reduces manual errors.

PROPOSED SYSTEM ARCHITECTURE

Proposed System Architecture

7

8

9

WORKFLOW

1

- User opens the application

2

- Views event details

3

- Enters booking details (name, email, etc.)

4

- System validates input

5

- Checks ticket availability

6

- Books tickets if valid
- Displays booking confirmation and summary

7

8

9

TECHNOLOGIES USED

1

Frontend:

2

React JS

3

HTML5

4

CSS3

JavaScript (ES6)

5

Tools:

VS Code

6

Web Browser (Chrome)

7

Concepts Used:

Functional Components

JSX

useState Hook

8

Event Handling

9

Conditional Rendering

MODULE DESCRIPTION

Module 1: Event Details Module

Displays event information like name, date, venue, price, and available tickets.

Module 2: Module 2: Booking Module

Allows users to enter details and book tickets.

Module 3: Validation Module

Validates:

Empty fields

Email format

Ticket count

Module 4: Ticket Management Module

Updates available tickets

Prevents overbooking

Module 5: Booking Summary Module

Displays:

User name

Number of tickets

Total amount

Ticket Booking App 

Event Details

Event Name: Tech Fest 2026
Department: CSE
Date: April 20, 2026
Time: 10:00 AM
Venue: Auditorium
Ticket Price: ₹100
Available Tickets: 50

Book Tickets

This is a React-based Ticket Booking Web Application that displays event details such as name, date, venue, and ticket price. It allows users to enter their details and book tickets online with proper validation. The system provides a simple and user-friendly interface for efficient and error-free ticket booking.

9

A screenshot of a web application form for booking tickets. The form is white with rounded corners and is set against a light gray background. It contains four input fields: 'Name', 'Email', 'Department', and 'Number of Tickets'. Below these fields is a blue button with the text 'Book Now' in white. The form is centered on the page.

This is a React-based Ticket Booking Web Application that displays event details such as name, date, venue, and ticket price. It allows users to enter their details and book tickets online with proper validation. The system provides a simple and user-friendly interface for efficient and error-free ticket booking.

Total Amount: ₹300

This image shows a successful ticket booking confirmation in the application. The user has entered valid details (name, email, department, and number of tickets), and the system displays a “Booking Successful” message indicating that the booking process was completed correctly.

ADVANTAGES & LIMITATIONS

ADVANTAGES

- Easy to use and user-friendly interface for students and faculty
- Prevents overbooking by validating ticket availability
- Provides real-time updates of available tickets
- Ensures data accuracy through proper input validation
- Fast and responsive performance using React JS
- Reduces manual work and human errors in booking

LIMITATIONS

- Does not store booking data permanently without database integration
- No authentication system (any user can book tickets)
- Limited to a single event (no multi-event support)
- Basic UI without advanced design or animations
- No payment gateway integration
